PART I – GENERAL INFORMATION

 Any time you see this symbol, hold mouse pointer over top and **additional information** will appear.

For each question, select only one check box or circle unless otherwise directed.

PART I - SECTION A: SUMMARY

Provide a general overview of the proposed project and rationale for site selection: 

Coastal Shellfish Corporation (CSC) is majority (51%) owned by the Metlakatla Development Corporation (MDC) of the Metlakatla First Nation. MDC is developing an aquaculture shellfish industry on the North Coast through Coastal Shellfish Corporation (CSC). In a broader context, Metlakatla sees the shellfish aquaculture project as multi-faceted initiative delivering on profitability, wealth creation, sustainable food supply and economic development. The project also turns "science into profit" while relying heavily on traditional knowledge.

The shellfish aquaculture initiative has had considerable financial support from First Nations, foundations and international investors. It has reached proof of concept and is attempting to commercialize a vertically integrated industry on the North Coast including hatchery, farms and processing facilities. CSC however does not have sufficient sites to expand production onto. The inability to achieve sites has resulted in losses of millions of 2017 cohort scallop seed from overcrowding and threatens the viability of the project achieving commercial success.

Additionally, CSC is operationally hampered by the weather of the north coast and is attempting to include in this expansion more protected sites under Canadian Shellfish Sanitation Program (CSSP) Appendix XIII rules that would allow sites in "unclassified" and "closed" areas to be used for younger seed which would later be transferred to "open" areas for final grow-out and harvest.

The Naden Islet site in the current tenure application is seen as having sheltered waters, high biological productivity and is close to the scallop hatchery located in Seal Cove, Prince Rupert. Pending CSSP classification would be used to grow seed scallops that would be "finished" on more exposed sites classified as "Approved" in more exposed areas.
